

Any improvements in the westernmost 200 feet (within the jurisdiction of the Shoreline Management Act) of the NW and SW subareas should be limited to walkways and public use or park areas. Outside that shoreline area, buildings should be located and configured to maintain as much openness and public views across the site as possible, with taller structures limited to the central and easterly portions.

Policy PW-4 A public access trail should be provided and appropriate signage installed along the entire Puget Sound shoreline of the NW and SW subareas and secured with an appropriate public access easement document.

The relatively lowland area west of the tracks (between 10 and 20 feet above sea level) is abutted east of the tracks by a heavily forested slope. See Fig. 1. The slope rises steeply (15% to 25% grades) from the railroad tracks to the top of the slope, which is at approximately elevation 200. See Figure 2. The tree line at the top of the slope consists of mature trees from 50 to 100 feet in height, which further obscures public views of Point Wells from the portions of Woodway above elevation 200.

Policy PW-5 New structures in the NW subarea should rise no higher than elevation 200.

New buildings east of the railroad tracks would be much closer to existing single family homes in Woodway and Richmond Beach. To reflect this proximity, buildings of a smaller scale are appropriate.

Policy PW-6 New structures in the SE Subarea should rise no higher than six stories.

In order to promote maximum openness on the site and prevent bulky buildings, the City should consider innovative regulations such as design standards and guidelines, building floor plate maxima, requiring a minimum separation between taller structures and the protection of public view corridors. Public views from city rights-of-way in the Richmond Beach neighborhood are a major part of the area's character, and provide a sense of place, openness, beauty and orientation. A prominent public view corridor across the lowland area, shown in Fig. 2, affords a public view from Richmond Beach Drive northwest to Admiralty Inlet and Whidbey Island. Placement and size of structures at Point Wells should be located and configured so as not obstruct this important public view corridor.

Policy PW-7 The public view from Richmond Beach Drive in Shoreline to Admiralty Inlet should be protected by a public view corridor across the southwest portion of the NW and SW subareas.

Policy PW-8 New structures in the NW subarea should be developed in a series of slender towers separated by public view corridors.

Transportation Corridor Study and Mitigation

A traffic and safety analysis performed by the City in the summer of 2009 evaluated the nature and magnitude of impacts likely to accrue from the development of Point Wells as an "Urban Center" under Snohomish County zoning, as well as development scenarios

assuming lesser orders of magnitude. This background information provided a basis for the City to conclude that, prior to the approval of any specific development project at Point Wells, the applicant for any development permit at Point Wells should fund, and the City oversee, the preparation of a detailed Transportation Corridor Study.

Corridor Study

The Transportation Corridor Study and Implementation Plan should include an evaluation of projected impacts on vehicular flow and levels of service at every intersection and road segment in the corridor. If a potential alternative access scenario is identified, it should be added to the corridor study. The Study should also evaluate and identify expanded bicycle and pedestrian safety and mobility investments, and identify “context sensitive design” treatments as appropriate for intersections, road segments, block faces, crosswalks and walkways in the study area with emphasis on Richmond Beach Road and Richmond Beach Drive and other routes such as 20th Ave. NW, 23rd Place NW, NW 204th Street and other streets that may be impacted if a secondary road is opened through Woodway.

Implementation Plan

The corridor study would be a step in the development of such a plan. The scope of the implementation plan should include a multimodal approach to mobility and accessibility to and from Point Wells, as well as detailed planning for investments and services to improve multimodal travel for adjacent communities between Point Wells and I-5. This could well include an integrated approach to accessing Point Wells, the Richmond Beach neighborhood, and Richmond Highlands with the Bus Rapid Transit system along Aurora Avenue, the I-5 corridor itself - focusing on the interchanges at N. 205th and N. 175th , as well as the Sound Transit light rail stations serving Shoreline.

While the analysis of vehicle flows is appropriate as part of the study, the solutions should provide alternatives to vehicle travel to and from Point Wells - as well as more transportation choices than those that currently exist today for the Richmond Beach neighborhood and adjacent communities.

Policy PW-9 To enable appropriate traffic mitigation of future development at Point Wells, the developer should fund the preparation of a Transportation Corridor Study as the first phase of a Transportation Implementation Plan, under the direction of the City, with input and participation of Woodway, Edmonds, Snohomish County and WSDOT. The Study and Transportation Implementation Plan should identify, engineer, and provide schematic design and costs for intersection, roadway, walkway and other public investments needed to maintain or improve vehicular, transit, bicycle and pedestrian safety and flow on all road segments and intersections between SR 104, N 175th Street, and I-5 that may result in traffic impacts as a result of proposed development at Point Wells with particular attention focused on Richmond Beach Drive and Richmond Beach Road. Road segments that would be impacted by an alternate secondary access through Woodway should also be analyzed, which would include 20th Avenue NW, 23rd Place NW and NW 204th Street. The Study and Transportation Plan should identify needed investments and services, including design and financing, for multimodal solutions to improving mobility and accessibility within the Richmond Beach neighborhood and adjacent communities, including but not limited to investments on Richmond Beach Drive and Richmond Beach Road.

Policy PW-10 The needed mitigation improvements identified in the Transportation Corridor Study and Implementation Plan should be built and operational concurrent with the occupancy of the phases of development at Point Wells.

Richmond Beach Road and Richmond Beach Drive provide the only vehicular access to Point Wells at this time. Therefore, it is critical that identified impacts be effectively mitigated as a condition of development approval. It is also vital that the traffic generated from Point Wells be limited to preserve safety and the quality of residential neighborhoods along this road corridor. In the event that secondary vehicular access is obtained through Woodway to the Point Wells site, the mitigation and improvements of the impacts to those additional road segments must also occur concurrent with the phased development.

Historically, mobility and accessibility in Richmond Beach and adjacent communities has been dominated by the single occupancy vehicle. Provision of bicycle and pedestrian facilities has been limited because retrofitting an existing road network with these facilities is an expensive undertaking. The Richmond Beach Road corridor is served by limited Metro bus service and is beyond a reasonable walking distance from potential development within Point Wells. Though rail service to a station in Richmond Beach was evaluated by Sound Transit, no service is envisioned in the transit agency's adopted 20 year plan. Improved transit, bicycle and pedestrian mobility is a long-term policy objective, but the majority of trips in the area will likely continue to be by automobiles utilizing the road network. The City's traffic study completed in 2009 shows that if more than 8,250 vehicle trips a day enter the City's road network from Point Wells, it would result in a level of service "F" or worse at a number of City intersections. In December 2011, the City increased the level of service from "E" to "D" which means more intersections will fail to meet the adopted level of service as result of increased trips related to development at Point Wells. This would be an unacceptable impact.

Policy PW-11 The City should address opportunities to improve mobility, accessibility, and multimodal east-west movement in the Richmond Beach Road Corridor between Puget Sound and I-5 as part of the update of the city-wide Transportation Management Plan. The City should also work with neighboring jurisdictions Woodway and Edmonds to improve north-south mobility. These opportunities should be pursued in a manner that reduces existing single occupancy vehicle trips in the corridor.

Policy PW-12 ~~In view of the fact that Richmond Beach Drive between NW 199th St. and NW 205th St. is a local secondary street with no opportunities for alternative access to dozens of homes in Shoreline and the Town of Woodway,~~ ~~The City continues to designate this as a local secondary street road with a maximum capacity of 4,000 vehicle trips per day.~~ ~~Unless and until, 1) Snohomish County and/or the owner of the Point Wells Urban Center can provide to the City the Transportation Corridor Study and Mitigation Plan called for in Policy PW-9, the City authorizes a development agreement between the owner(s) of property within the Point Wells subarea and the City of Shoreline that permits City enforcement of a maximum vehicle trip count on Richmond Beach Drive NW with financing of mitigation necessary to support the increased trip limits as determined by a Traffic Corridor Study.~~ ~~sources of financing for necessary mitigation are committed, the City should not consider reclassifying this road segment.~~ In the event a development agreement is not authorized, the City should use the policies in this Subarea Plan as

a basis for approving, denying or conditioning Shoreline right-of-way permits proposed for mitigation projects under substantive SEPA authority.

Interjurisdictional Coordination

The City should work with the Town of Woodway and Edmonds to identify ways in which potential future development in the lowland portion of Point Wells could be configured or mitigated to reduce potential impacts on Woodway. There is no practical primary vehicular access to the lowland part of Point Wells other than via Richmond Beach Road. However, the City should work with property owners and Woodway to provide a bicycle and pedestrian route between Woodway and Point Wells.

The Growth Management Act states that cities, rather than county governments, are the preferred providers of urban governmental services. Because urban governmental services and facilities in Shoreline are much closer to Point Wells than are similar services and facilities located in Snohomish County, it is most efficient for the City to provide those services.

Working with its public safety partners, Shoreline Fire Department and Shoreline Police Department, the City should invite Snohomish County to discuss an interlocal agreement to address the timing and methods to transition local governmental responsibilities for Point Wells from the County to the City. Included in these discussions should be responsibilities for permitting and inspection of future development at Point Wells, and possible sharing of permitting or other local government revenues to provide an orderly transition.

Policy PW-13 The City should work with the Town of Woodway, ~~City of Edmonds~~ and Snohomish County toward adoption of interlocal agreements to address the issues of land use, construction management of, urban service delivery to, and local governance of Point Wells. A joint SEPA lead-agency or other interlocal agreement with the County could assign to the City the responsibility for determining the scope, parameters, and technical review for the transportation component of the County's Environmental Impact Statement prepared for a future project at Point Wells. Under such agreement, this environmental analysis, funded by the permit applicant, could satisfy the policy objectives of the Transportation Corridor Study and Implementation Plan referenced at PW-10.

Policy PW-14 In the event that development permit applications are processed by Snohomish County, the City should use the policies in this Subarea Plan as guidance for identifying required mitigations through the SEPA process and for recommending changes or additional permit conditions to achieve greater consistency with the City's adopted policies.
